EXPERIENCE

Backend Engineering Mentee

Ahmed Emad Mentorship Program | Oct 2025 – Present | Remote, Egypt

- intensive 6-month backend engineering program focusing on system design, OOAD, architecture, and design patterns.
- Improved API performance by ~25% through caching strategies and optimized database queries.
- Reduced code duplication by ~40% by designing modular backend components.
- Built backend services using Node.js, Express, and MongoDB/PostgreSQL.
- Completed weekly engineering challenges, system design sessions, and debugging reviews.

Junior Software Engineer

Spiritual Data | Sep 2025 – Present | Remote, United States

- Refactored backend logic to improve reliability and maintainability, increasing system stability by ~30%.
- Debugged the frontend and resolved UI issues to bring multiple modules up to production-ready quality.
- Fixed 25+ bugs across the stack, significantly improving system performance.
- Improved load times by ~35% through component optimization and reduced bundle size.
- Collaborated in agile workflows, contributing to feature development and weekly releases.

Full Stack Engineer

Al Tamayoz Real Estate | Apr 2025 – May 2025 | Remote

- Developed a full-stack property management system including dynamic property show pages and admin CRUD.
- Added 4+ system modules enhancing property management workflows.
- Improved dashboard usability, reducing task completion time by ~35%.
- Built secure REST APIs with Express.js & MongoDB and optimized queries for ~20% faster responses.
- Developed a fully responsive interface using React and Tailwind CSS.

PROJECTS

Student Management Platform (Freelance)

[live](#), [code](#)

- Reduced manual record-keeping time by ~70% through automated session logging.
- Centralized attendance, notes, and progress history into a unified platform.
- Delivered real-time oversight through a secure admin dashboard.

Tech Stack: React, Node.js, Express.js, MongoDB, JWT, Tailwind CSS

Property Management System (Freelance)

[live](#), [code](#)

- Developed a full-stack application with CRUD functionality and dynamic property pages.
- Created a responsive UI with React and Tailwind CSS.
- Engineered secure REST APIs using Express.js & MongoDB.

Tech Stack: React, Tailwind CSS, Node.js, Express.js, MongoDB, JWT

Live Chat App

[live](#), [code](#)

- Implemented real-time communication using WebSockets.
- Added join/leave notifications and message broadcasting.
- Developed a responsive React frontend for multi-device use.

Tech Stack: React, Node.js, Express.js, WebSockets

SKILLS

Front-End: React.js, Tailwind CSS, HTML, CSS, JavaScript

Back-End: REST APIs, Express.js (Node.js), TypeScript, Python, FastAPI, WebSockets

Databases: MongoDB, MySQL

Other: JWT Authentication, Git, Problem Solving, Project Management, AWS (EC2), Linux
